

conditions and leads to an efficient supply of payphones and economically efficient results.

47. According to my calculations, the market would price access code and subscriber 800 calls at a rate that exceeds the local coin rate. My best estimate is that the rate would be approximately \$0.42 to \$0.43. If the Commission fails to provide this amount of compensation, the result will be fewer payphones than a competitive market otherwise would have provided, a loss of efficiency, and harm to social welfare. I therefore recommend that the Commission set per-call rates based on the outcomes a competitive market would produce, and that the per-call compensation rate be set at the local coin rate plus approximately \$0.07 to \$0.08.
